Project Progress:

Team Member (1): Carlo Napolitano

1. What did you accomplish Today?

I formed a group and started researching details and information about the supply management system. We also talked to the team about what a supply chain management System is as well as how we will approach the Project, for example making a website or a window application, in addition, what sort of data will be put into the project, e.g. will we attempt to add a demand forecasting and if so how would we do it. Also, I went to the Syndicate and got information on what the project would be based on and then went and broke it down to the rest of my team.

2. What obstacles are impeding your Progress

A couple of things have come up for us as a team, for example pinpointing exactly what our services will provide and fully understanding what supply chain management provides at first, we initially thought that we would be providing a service to everyday clients however, then we came to understand that this is a business-to-business services.

Team Member (2): Omed Bahaddin
